MultiversX campaign and retention layer proposal

CONSUMER UTILITY | TOKEN-READY | BRAND-NATIVE

THE INTERNET-SCALE ENGAGEMENT LAYER

# A MultiversX-native campaign platform that turns wallet-ready traffic into trusted, returning users.

Emorya Gamify can become a branded MultiversX activation surface for onboarding, progression, rewards, referrals, and repeat engagement. The platform is already built around wallet-linked identity, XP-first progression, campaign packs, premium lanes, and configurable token payouts, so it can feel like a natural MultiversX ecosystem utility rather than an external campaign microsite.

See the branded product slice

Why this fits MultiversX

## Why this fits the MultiversX ecosystem

### Chain-native presentation

The platform can be rendered directly inside MultiversX visual language, which lowers friction and makes the product feel like part of the ecosystem rather than a disconnected external tool.

### Token movement with context

Rewards can be tied to actual progression, partner milestones, and approved campaign moments, instead of token distribution happening without behavioral signal behind it.

### Builders and users both benefit

Projects get campaign infrastructure, users get clearer progression and trust, and MultiversX gets another branded utility layer that points back into wallet and ecosystem relevance.

### Configurable for partner growth

The platform is already token-ready and campaign-aware, so partner presets, reward changes, and different funnel types can be supported without forking the product every time.

## Sample platform slice inside MultiversX branding

This is the important proof point: not just a pitch, but a preview of how the product can look when it is rendered as a native MultiversX experience. The structure stays the same, but the presentation feels chain-native from the first screen.

LIVE PACK

## MultiversX Builder Activation

Wallet-linked progression

Guide new users from community traffic into trusted, reward-ready actions while keeping EGLD, xPortal and partner utility visible throughout the journey.

**Link xPortal**
Unlock reward rail and higher-trust campaign eligibility
READY NOW

**Complete weekly builders mission**
Progress the active campaign pack and boost leaderboard pressure
NEXT

**Refer a premium convert**
Open the stronger reward band for ambassador-style growth
HIGH UPSIDE

### Projected reward

EGLD / partner-token preset with approved settlement flow and wallet-ready payout state.

### Weekly pressure

Leaderboard movement, mission inbox nudges, and partner-campaign reminders keep pace visible.

### Operator control

Campaign packs, reward presets, approvals, reporting, and mission analytics are already built.

## The partnership angle

### Instant familiarity and trust

The reskinning layer matters because it creates immediate brand recognition. Users feel like they are still inside the MultiversX ecosystem, which reduces friction and increases confidence from the first interaction.

### Not just a campaign page

This can operate as an extra utility surface for the ecosystem: a place where onboarding, quests, rewards, partner pushes, and retention loops can live together in a more durable way.

Draft concept for partnership discussion. Brand cues translated from the saved MultiversX homepage reference.
