MultiversX campaign and retention layer proposal

CONSUMER UTILITY | TOKEN-READY | BRAND-NATIVE

THE INTERNET-SCALE ENGAGEMENT LAYER

A MultiversX-native campaign platform that turns wallet-ready traffic into trusted, returning users.

Emorya Gamify can become a branded MultiversX activation surface for onboarding, progression, rewards, referrals, and repeat engagement. The platform is already built around wallet-linked identity, XP-first progression, campaign packs, premium lanes, and configurable token payouts, so it can feel like a natural MultiversX ecosystem utility rather than an external campaign microsite.

See the branded product slice

Why this fits MultiversX

Campaign-source onboarding

Traffic from Zealy, Galxe, Layer3, direct community pushes, or partner funnels can land in campaign-specific paths.

Wallet-linked progression

Users move from starter actions into xPortal connection, reward readiness, deeper trust, and richer campaign lanes.

Repeat utility, not one-off quests

Weekly loops, progress states, referrals, and reward visibility create reasons to return after the first activation.

Why this fits the MultiversX ecosystem

Explore the Ecosystem

Brand-native

Rendered directly in MultiversX visual language to feel familiar from the first touchpoint.

Partner-ready

Connected to campaigns, partner tokens, and ecosystem activations without rebuilding the product.

Reward-linked

Secure the network effect with wallet-ready rewards,

mission progression, and repeat participation.

Operator control

Give teams campaign infrastructure, reporting, approvals, and reward controls in one system.

Sample platform slice inside MultiversX branding

This is the important proof point: not just a pitch, but a preview of how the product can look when it is rendered as a native MultiversX experience. The structure stays the same, but the presentation feels chain-native from the first screen.

MultiversX Builders Hub Missions

Dashboard | Partner Campaigns | Rewards | Leaderboard

LIVE PACK

MultiversX Builder Activation

Wallet-linked progression

Guide new users from community traffic into trusted, reward-ready actions while keeping EGLD, xPortal and partner utility visible throughout the journey.

Link xPortal

READY NOW

Unlock reward rail and higher-trust campaign eligibility

Complete weekly builders mission

NEXT

Progress the active campaign pack and boost leaderboard pressure

Refer a premium convert

HIGH UPSIDE

Open the stronger reward band for ambassador-style growth

Projected reward

EGLD / partner-token preset with approved settlement flow and wallet-ready payout state.

Weekly pressure

Leaderboard movement, mission inbox nudges, and partner-campaign reminders keep pace visible.

Operator control

Campaign packs, reward presets, approvals, reporting, and mission analytics are already built.

The partnership angle

Instant familiarity and trust

The reskinning layer matters because it creates immediate brand recognition. Users feel like they are still inside the MultiversX ecosystem, which reduces friction and increases confidence from the first interaction.

Not just a campaign page

This can operate as an extra utility surface for the ecosystem: a place where onboarding, quests, rewards, partner pushes, and retention loops can live together in a more durable way.

Draft concept for partnership discussion. Brand cues translated from the saved MultiversX homepage reference.
